THE MARKET FOR FARM PRODUCTS IN URBAN CENTRES IN NORTHERN ONTARIO

INTRODUCTION

Early in July, 1941, a conference of Northern Ontario Agricultural representatives was called to meet with representatives from the Economics Division, Marketing Service, Department of Agriculture, Ottawa, and the Co-operation and Markets Branch, Ontario Department of Agriculture, Toronto, to discuss the advisability of conducting a joint marketing survey of the Gold Belt towns in Northern Ontario. The field work thus sponsored was begun in August and continued until completed early in December.

The survey takes in the four towns of Timmins, Kirkland Lake, Cochrane and Iroquois Falls The first two named are strictly mining towns of considerable importance as consuming centres for various farm products. Cochrane may be described as an agricultural town having a wide distribution to woods camps, while Iroquois Falls is strictly a pulp and paper town. Both the latter towns, though in an agricultural area of considerable possibilities, distribute such quantities of shipped-in produce that it was felt necessary to include them in this survey.

A justification for the above study may be seen in a perusal of the tables in the Appendix showing receipts of the various commodities. No previous effort had been made to obtain such exact details regarding the size and scope of these markets and it was felt their importance was not fully appreciated in some instances and over-estimated in others.

There are about 5,000 farmers located in the two districts of Temiskaming and Cochrane (the area designated as "Northern Ontario") who are dependent upon these towns for a market for their produce.

With the idea in mind of being of direct assistance to these farmers, Northern Ontario or local receipts of farm produce were kept separate for purposes of comparison. This should give Northern Ontario producers definite information as to what farm commodities are in demand, the volume required, and the extent to which they now supply it.

As is the case adjacent to other industrial centres, many miners at Timmins live on the farm where their families grow much of their own living, thereby taking them largely out of the consuming class for products grown on other local farms or shipped in from other areas.

Acknowledgements: The authors wish to acknowledge the assistance given by Mr. Leo Fortin then on the Economics Division staff, who participated in the field work, and to other members of the staff in tabulating the volume of data obtained.

We also desire to thank the wholesalers, distributors, railway and express agents and others who gave us access to their records and made this work possible.

SCOPE AND METHOD

To obtain information for this study required considerable field work and consisted of detailed abstracts from the trafficerecords of all railways both freight and express, and of transport companies bringing produce into the area. Every shipment, whether in full cars or l.c.l. was recorded as to commodity, weight or count, shipping point, consignee and month of arrival.

Fruits and vegetables coming North by truck was recorded at the inspection station at Gravenhurst. Representative prices were obtained for nearly all commodities from an examination of all wholesalers' receiving sheets. The average prices recorded are therefore wholesale prices, with the exception of those at growers' retail markets.

A special survey, based upon a questionnaire presented in person and taken from a sample group of growers, covered the three growers' markets operating in the area. These records also designated the commodity, quantity, quality, price and month of sale. Details are discussed under the heading of "Marketing Northern Ontario Products".

Milk distribution was a major subject of the survey in which records were taken from every distributor in each town.

In addition, an effort was made to obtain from wholesalers the most desirable grades of produce required for their trade and the extent to which local products met this competition. Growers were asked for their opinion as to how the marketing of northern products could be improved to increase their sales in these markets, and to what extent and for what products could production in this area be profitably increased.

The following is a list of business records taken, and interviews made, which constituted the field work of this survey:

Northern Ontario Growers	52
Milk Distributors	10
Fruit and Vegetable Wholesalers and Jobbers	19
Meat Packers' Wholesalers and Jobbers	26
Hay and Grain Wholesalers and Jobbers	8
Transport Carriers	28

SIZE AND NATURE OF THE GOLD BELT AREA

Some idea of the size of these consumer centres may be had by a glance at the following table which shows the various populations taken from the Dominion of Canada census of 1941. Fortunately, this period corresponds closely to the year in which this marketing study was made so there is not

likely to be any marked difference in the population. However, a municipality like Teck township which contains the urban centres of Kirkland Lake and Swastika may also contain rural dwellers. Most of these people work in Kirkland Lake and are consumers quite similar to the urban dweller.

Table 1.- Population (1941 Census) of the Urban Centres in the Gold Belt Market Area

Timmins	28,780
* Tisdale (south Porcupine)	9,461
* Whitney (South Porcupine)	1,487
* Mountjoy (Timmins)	1,729
Total Timmins	41,457

(Swastika)	
Larder Lake	1,464
Total Kirkland Lake	21,873
Cochrane	2,844
Iroquois Falls	1,302
* Calvert (Ansonville)	3,269
Total Iroquois Falls	4,571
Total all four towns	70,755

* Organized as a township only.

Kirkland Lake lies at the northern boundary of Temiskaming district and, in a local way, provides a market for farmers of that district. A flourishing growers' market has developed with the growth of the "town". This town began as a conglomeration of shacks in 1913. By 1940-41 the pay roll amounted to $10,427,925 with 5,519 men employed (including Larder Lake).*

The town of Timmins is located in Tisdale township about 80 miles west of Kirkland Lake and near the southern boundary of Cochrane district. In addition to railroad facilities, the Trans-Canada highway passes near both of these towns. While the nearest farmers to Kirkland Lake reside some twenty-five miles away, such is not so at Timmins where farm lands and farmers are contiguous to the town. These farmers, however, supply but a small fraction of the market requirements, which is not surprising when one realizes that the total production efforts are directed almost entirely to mining, with relatively high wages being paid to mine workers.

Timmins mines employed 9,427 men with a payroll of $17,665,944 for the year under review.*

*Dominion Bureau of Statistics "Summary Review of the Gold Mining Industry in Canada", 1940-41.

Cochrane, the third town mentioned in this study, lies in the heart of the Great Clay Belt, some seventy miles north-east of Timmins.

The three towns named form a more or less regular triangle with each other, seventy to one hundred miles apart. Iroquois Falls lies along the one hundred mile side, some thirty-five miles south-east of Cochrane and sixty-five miles north-west of Kirkland Lake. It may be noted that they cover a considerable territory and therefore the better to serve the whole agricultural territory as a market for farm products. It will be readily apparent from the above that any survey to tell the whole story must include all four towns, (see figure 1). Cochrane, which is located at the junction of the Temiskaming and Northern Ontario Railway and the Canadian National Railway, has shrunk considerably in size and importance since the shops of the latter Railway were removed in 1929. However, it still serves as an important distribution centre for the surrounding pulpwood and lumber camps.

Iroquois Falls, including the "suburb" of Ansonville, is also an extensive distributing point to the pulpwood camps In addition, the pulp and paper mill here employs several hundred men at good wages. These provide an excellent market for local farm produce, and like Cochrane, much of it is retailed from house to house and so escaped recording in this survey. The annual payroll amounted to over $2,500,000 for the year July 1940 to June 1941. Some 1,700 men were employed.

EXTENT OF THE GOLD BELT MARKET

The extent of the market for agricultural products in these four towns from July 1940 to June 1941 may be seen by a glance at Table 30 of the Appendix. From this it will be noted that meat products, while standing second to dairy products in the list for volume, come first when values are considered. Total meats were valued at $2,290,191 or 36 per cent of all receipts. This percentage would be even greater if it were possible to have recorded local meats delivered by farmers from house to house.

Dairy products were second in point of value with 32 per cent of the total. This amounted to $2,056,229. All of these products were sold through organized channels so that any discrepancies in the records would be very small. They include processed milk by a comparison of which with fluid milk it is hoped to draw certain conclusions.

Fruit, vegetables and potatoes accounted for 20 per cent of total value of receipts. Eggs were 9 per cent, grains, hay and honey made up the balance for a total of all farm products received of $6,376,989 (laid down cost).

This means an annual per capita consumption of $90 38.

The Prairie Provinces, lumped together for the purposes of the survey, provided the major receipts of meats, grains and eggs. Southern Ontario was the origin of the largest percentage of vegetables and honey. From Northern Ontario came the largest volume of and the greatest value for dairy products. The Maritime receipts of potatoes provided the bulk of all arrivals, while

imported fruits comprised 63 per cent of all receipts of this commodity.

The various products recorded in this survey are discussed at some length under commodity grouping on the following pages.

MEATS

During the year July 1940 to June 1941, receipts of meat totalled 15,127,689 pounds valued at $2,290,191 (Appendix Table 31).

Three large packing companies operate in this area and their meats in general are shipped weekly from Winnipeg.

Two of the above companies have cold storage warehouses in Timmins and distribute from there. The other takes orders a week ahead and delivers direct from the iced or heated car. One packer stated that the grades of beef which they sold were Red brand, 10 per cent; Blue brand, 40 per cent; and Standard brand, 50 per cent.

A local abbatoir operates in the area and handled about 50 per cent of the meat supplied from Northern Ontario. The farmers' market in Kirkland Lake handled most of the balance

Pork,- Pork and products ranked highest in volume of receipts of meats at the four Northern Ontario towns, 6,221,481 pounds were received during the year under review with a value of $972,360 Of this total receipts from Western Canada were 70 per cent while receipts from Northern Ontario were 8 per cent of the total weight.

Receipts were fairly even over the entire year, but those from Northern Ontario were heavier during October, November and December and were lowest during July and August (Appendix Table 32).

The average price received by all receipts was $15.69 per hundred pounds Western Canada receipts averaged slightly higher at $15.79 and those from Northern Ontario less than the general average at $15.37 per one hundred pounds.

Beef,- Receipts of beef in the four towns were 6,062,058 pounds with a total value of $781,934. Western Canada supplied 80 per cent of this volume, while Northern Ontario receipts amounted to 13 per cent of the total volume and value.

The average price for Western beef was $12.86 while Northern Ontario receipts averaged $12.80 per hundred pounds (Appendix Table 33). Receipts were only slightly lower in June and highest for the months of September, October and November than the average for the year.

Veal,- Veal stood third in importance among meats on a weight basis but was surpassed by poultry when values were considered. Receipts amounted to 1,045,000 pounds and cost $160,830 laid down. This is an average cost of $15.39. Western Canada receipts amounted to 84 per cent of the total volume and Northern Ontario receipts were 11 per cent with 112,000 pounds.

The average price of veal from Western Canada was $15 17 per hundred pounds, while the average for Northern Ontario was $17.14 (Appendix Table 34). This higher price may be accounted for largely by the fact that the comparatively large receipts on the Kirkland Lake market were sold at a retail price.

No receipts were recorded at Iroquois Falls and it may be assumed that supplies, if any, were received through the Timmins offices of the meat packing companies.

Poultry (dressed),- Total receipts of all poultry were 984,415 pounds with a value of $240,592 at the average price of 24.43 cents per pound.

Western Canada supplied 60 per cent of all poultry while 9 per cent originated in Northern Ontario.

According to one packer, Western Canada shipped 95 per cent of all the turkeys. This movement from the prairies may be noted from Appendix Table 35, when receipts increased for October and November and rose very sharply for the month of December.

The average price of Western receipts was slightly higher than the general average showing the influence of heavy turkey receipts. The average of 25.11 cents for poultry supplied by farmers in Northern Ontario may be accounted for by the large portion sold at retail on farmers' markets. All poultry was figured on dressed basis though 30 to 35 per cent of sales on Kirkland Lake growers' market were of live birds. At Timmins perhaps 20 per cent should be added to total receipts to cover live birds retailed by farmers and others to the Jewish trade.

Some poultry came from Quebec and the Maritime Provinces.

Lamb,- Total receipts of lamb amounted to 342,110 pounds with a value of $59,355. Of this, Western Canada receipts were 85 per cent of the total weight, Northern Ontario receipts were just over 8 per cent. The total averaged 17.35 cents per pound, with Western Canada values averaging slightly less at 16.97 cents and Northern Ontario considerably more at 20 30 cents per pound (Appendix Table 36). This higher average for Northern Ontario receipts may be accounted for partially by the enviable reputation this product has on local markets and partially by a portion having been sold on the retail markets.

Western receipts reached a high point for the month of September when 33,787 pounds arrived and a low of 18,973 pounds during March. Northern Ontario receipts were 28,415 pounds and 26,339 pounds of this was received during the six months period, July to December, none at all being received during April. September was the high month with 6,249 pounds received. Per capita consumption for the year was 4.8 pounds.

Fancy Meats,- Fancy meats consists of liver, kidney, tongue, etc., mostly of beef origin. Western Canada receipts amounted to 94 per cent of the total of 177,588 pounds. The total value was $25,798. Receipts were fairly uniform month by month, though October receipts were higher than the average (Appendix

Table 37)

Total receipts averaged 14.53 cents per pound.

Unidentified Meats,- This consisted of 295,037 pounds which arrived unclassified. It had an arbitrary value of $49,022. Receipts were highest during April, though well distributed throughout the year (Appendix Table 38). For the most part, these were small express receipts. Southern Ontario supplied 92 per cent of receipts.

DAIRY PRODUCTS

Dairy products received in the four towns surveyed amounted to over 26 million pounds, of which Northern Ontario supplied better than 19 million or nearly 75 per cent of total volume (Appendix Table 39). However, 18 million of this volume was fluid milk, cheaper in price per pound than other dairy products on the average, and therefore the value of Northern Ontario receipts was only 41 per cent of a total of $2,056,229.

Fluid milk is especially adapted to local production and certain specialized areas have been developed adjacent to these urban centres. This commodity is difficult to transport efficiently over long distances. Consequently, 100 per cent of the receipts were from local farms equipped to comply with local Board of Health regulations. In addition, some 1,483,200 pounds of fluid milk were shipped to Noranda, P.Q.

Thus it may be noted from Appendix Table 30 that dairy farming is the most important type of agriculture practiced in the North where the products are sold largely to the mining towns. However, while local milk supplies the entire needs of the consumer, such cannot be said for butter, cheese, cream and processed milk. These being in a concentrated form, can be stored and shipped at cheaper rates and are produced more cheaply at points of surplus milk supply.

Fluid Milk,- The production of fluid milk to supply Northern Ontario towns was the major contribution of farmers in the area. It was the only product in which all receipts were of local origin. It may be assumed that milk, being a perishable product, would not stand shipment over long distances and therefore, production tends to develop close to large consuming centres and with respect to milk supplies the area has become self-sufficient sooner than it has for any other agricultural product. Total receipts of milk at the four towns were 181,415 hundredweight valued at $523,351, or an average price to producers of $2.88 per 100 pounds (Appendix Table 41).

Milk Distribution,- There are ten milk distributors operating in the four towns surveyed. Their combined sales amounted to 6,121,311 quarts with a retail value of $810,642. This was two distributors less than were operating in the same area in 1937. The small number of distributors, together with the fact that pasteurization was in force in all towns, made it comparatively easy to get accurate records of all the local dairy business. These, in nearly every instance, were taken from returns made to the Statistics Branch of the

Ontario Department of Agriculture.

The Ontario Milk Control Board, at the request of producers, approved their agreements with the dairies in all towns except Cochrane. Producers' associations are organized to look after their interests, making no difference as to what market the milk goes. By agreement, the dairies deduct 1 cent per 100 pounds from producers' returns for the purposes of the associations.

Consumer prices were the same in Kirkland Lake and Timmins at 14 cents per quart retail and 12 cents wholesale. Cochrane and Iroquois Falls, being in the agricultural section and nearer to the sources of supply, had a lower price of 12½ cents retail for both towns and 10 and 11 cents per quart for wholesale accounts respectively.

Timmins and Kirkland Lake had a higher price of 8 cents each for pints retail and 7 cents wholesale.

Table 2 shows the amount of milk sold retail and wholesale in these towns with an average of 64.5 per cent retailed.

Per capita consumption of milk in the four towns of 71,000 people for the year studied was .236 quarts per day.

Consumption reached its highest peak of the year during the month of June with 17,581 quarts daily average. It was lowest during July and August with a daily average of 15,733 quarts.

This low point of the year may be accounted for by the fact that many families left the North during the school holidays. This does not appear to have been offset by incoming tourists and visitors.

Each market had a particular set-up with regard to the production and the price paid producers for their milk.

Timmins Milk Market,- Timmins is the largest milk market in the area, using more than 55 per cent of all milk processed and fluid, recorded (Table 3).

Table 3.- Volume of Receipts of Fluid and Evaporated Milk in Four Towns in Northern Ontario, Covered by Survey in 1940-41

*In terms of fresh milk.

Producers for this milk market enjoy what is perhaps the highest price paid for fluid milk in any market in Canada when they receive $3.24 per 100 pounds for milk paid for at the base price. The Porcupine Milk Producers Association bargains for the producers and have succeeded in maintaining a more or less closed market for their product.

A two-price or surplus price is in effect and only 86 per cent of milk purchased was sold as milk - over 8 per cent was used in making cream, while 6 per cent went into ice cream, chocolate dairy drink and buttermilk. Three reasons support the two-price structure at this town. The relatively narrow spread on which distributors operate seems to make the two-price market necessary. The long distance from Southern Ontario points supplying cream make it advantageous for dairies to obtain their requirements locally, especially during warm weather. Local farmers would rather send the milk at a surplus price than to separate at home and send the cream. They receive manufacturing prices for this milk which is not supposed to run over 15 per cent of total volume supplied.

Kirkland Lake Milk Market,- Producers of milk for this market receive $2.50 per 100 pounds while the consumer pays the same prices as at Timmins. Situated nearer to sources of supply and in competition with producers for creameries, they do not enjoy the same natural protection Timmins producers do. The Temiskaming Milk Producers' Association guides the farmers' interests and have prevented a two-price market All milk is paid for at the base price mentioned. About 91 per cent of all milk purchased was sold as fluid milk; 6 per cent went into chocolate dairy drink and buttermilk and 3 per cent was used in the manufacture of ice-cream and cream.

Kirkland Lake milk market was next to Timmins in volume of receipts as 28 per cent of all processed and 39 per cent of all fluid milk for the four towns were received in Kirkland Lake. All of the fluid milk was produced on Temiskaming district farms and collected daily by the dairies' own trucks.

Cochrane Milk Market,- This is the oldest market in point of years, and when the railway shops here were in full operation before 1929, Cochrane was an important consuming centre for all milk products. However, it is now in third place and this only by reason of being an important distributing point for processed milk to the surrounding lumber camps. Because of many private sources of supply, total fluid milk receipts could not be accurately recorded. It may be assumed that per capita consumption was low. Retail price was 12½ cents. A very large percentage of local milk production went to cheese factories, while some was shipped to Timmins and Iroquois Falls when shortages occurred in these towns. Sweet cream was also shipped to these points during the summer months, while churning cream went to creameries outside the immediate neighbourhood.

Iroquois Falls Milk Market,- This market was opened by the Abitibi Pulp and Paper Company in 1914 to supply their own town. The milk is produced on the company's farm and is sold at retail only for 12½ cents per quart. Another distributor operating in Ansonville, a suburb of Iroquois Falls, pays $2.40 per 100 pounds for milk and retails at 12½ cents with wholesale accounts at 11 cents per quart.

Milk Distributors' Sidelines

Every distributor of milk in the area handled at least one sideline or milk by-product and most of the distributors in the two larger markets carried a full line as Table 4 will show. None of them, however, attempted to handle products other than dairy during the year studied. None sold butter or cheese, but cream, ice cream, chocolate dairy drink and buttermilk were the main items carried.

Table 4.- Milk Distributors' Sales of Sidelines at Four Northern Ontario Towns

		Timmins	Kirkland Lake	Cochrane	Iroquois Falls	Total
Chocolate dairy drink	qt.	118,565	98,632	-	4,870	222,067
	$	17,613	14,350	-	682	32,645

	$	79,678	48,740	13,000	-	141,418
Cream	qt.	86,412	62,157	305	8,607	157,481
	$	62,498	38,550	183	5,155	106,386
Total	qt.	521,198	389,122	40,305	15,470	966,095
	$	167,304	108,963	13,183	5,909	295,359

Ice Cream,- The four Northern Ontario towns consumed 420,552 quarts of ice cream at a total laid down cost of $141,419. A large proportion was made at New Liskeard within the district but outside the markets surveyed. This portion was forwarded to the different towns as mix at a cost of $1.30 per gallon. The balance made by certain dairies from surplus milk did have a slightly higher average price per gallon.

The distribution of ice cream may be noted from table 5. Here no figures are shown for Iroquois Falls. The explanation for this, as is the case for numerous other products, is that the mix was shipped to Timmins and distributed from there and no separate record was kept.

As might be expected, the consumption of ice cream is quite seasonal when 257,116 quarts were used during the four months, May to August, or 61 per cent. This is a daily average of 2 ,090 quarts consumed as compared with the low point in January when daily consumption averaged 345 quarts (see also Appendix Table 44).

Table 5.- Average Daily Sales of Ice Cream in Four Northern Ontario Towns, 1940-1941

Processed Milk

Under this heading is included condensed, powdered and evaporated milk with the latter comprising more than 90 per cent of the total receipts. All originated in Southern Ontario. The survey indicated that 7,853,160 pounds of processed milk was received during the period under review. This figure is the fresh milk equivalent, using the ratio 2.5:1. On this basis, evaporated or processed milk comprised 30.2 per cent of volume and 31 per cent of the value of all milk received at the four towns. (See table 6 and Appendix Tables 45 to 48).

Table 6.- Receipts of Fluid and Evaporated Milk in the Gold Belt of Northern Ontario During 1940-41

Month	Fluid milk	Evaporated*	Total	Fluid milk	Evaporated*	Total
	lb.	lb.	lb.	$	$	$
July	1,506,771	153,150	1,659,921	42,784.90	4,530.25	47,315.15

Percentage	69.8	30.2	100.0	69.0	31.0	100.0

*In terms of fresh milk equivalent.

While the volume of receipts of fluid milk were very regular the year around, such was not the case with processed milk which varied from a low of 153,150 pounds in July to 1,199,560 pounds received in December. This irregularity of receipts does not necessarily give the trend of consumption. It may be caused by the methods of purchasing used by receivers who place their orders to receive the benefits of lower carload freight rates which might come at irregular intervals.

Any expansion of the fluid milk market at the expense of processed milk depends directly on the price at which either one can be sold to the consumer. This expansion is limited where irregular quantities of milk are required at irregular intervals or in out-of-the-way places where daily deliveries of fresh milk are not possible.

Butter,- Receipts and places of origin for butter followed a similar trend to that of meats, 66 per cent came from Western Canada, 15 per cent were produced locally in Northern Ontario, 18 per cent in Southern Ontario and the balance in the Province of Quebec (Appendix Table 40).

Local receipts were not limited entirely by a lack of production. The three large packing companies operating in the area have built up a large business in butter in conjunction with the sale of meats. While they are willing to and do sell local butter, it is so easy to include their requirements in their weekly meat cars from Western Canada where butter is cheaper and perhaps needed to make up weight in the east-bound cars.

No dairy butter was encountered or recorded.

Total receipts were 31,092 hundredweight with a value of $954,068.

Prices varied slightly with the point of origin from a low of 22.4 cents per pound for butter from Southern Ontario in July to a high of 35.6 cents in December. Northern Ontario prices appeared more level throughout the year from a low of 24.2 cents in July to 32.7 cents in December. The reason is perhaps found in selling to the same customers and not following daily market fluctuations.

The general price level had risen considerably by the end of the year studied. Receipts were very even through the year with October and November showing slightly larger figures.

Receipts on Northern Ontario basis alone were not at all uniform when 88 per cent was received during the seven months, May to November.

Butter constituted only 12.4 per cent of weight but was 47 per cent of the value of all dairy products received during the period studied.

Cheese,- Cheese receipts at the four towns amounted to 618,202 pounds with a total value of $126,282 (Appendix Table 42). No differentiation was made between cheddar or factory make and the processed cheese, though the latter made up a large proportion of the total value.

As was the case for butter, Northern Ontario receipts of cheese were not limited by lack of production as cheese was shipped out to Montreal during the summer period of peak production. Consumer preference for processed cheese, especially during the summer season, handicaps the sale of the local make. Cold storage facilities would probably spread the marketings over a longer season and allow these towns to consume all local production.

Southern Ontario supplied 82 per cent of the total receipts of cheese, Western Canada 12 per cent and the balance came from Northern Ontario, Quebec and imported origins.

Cream,- Sweet cream received at the four Northern Ontario towns amounted to 126,939 pounds of butterfat with an average cost of 44.7 cents per pound and a total value of $56,732 (Appendix Table 43). Of these receipts, Northern Ontario provided 52,824 pounds valued at $22,422, or an average price of 42.4 cents. The balance, received from Southern Ontario, amounted to 74,115 pounds, which at 46.3 cents, had a value of $34,310.

On this basis, receipts from Southern Ontario made up 59 per cent of the total and from Northern Ontario 41 per cent. Receipts varied as to origin at the different towns. Iroquois Falls and Cochrane receipts were entirely from Northern Ontario. Kirkland Lake received 67 per cent from this source, while Timmins received but 8 per cent, the rest being of Southern Ontario origin. Thirty-two per cent of total receipts at Kirkland Lake came express from Southern Ontario. Eighty per cent of sales on all the markets were of 32 per cent butterfat.

Sales of cream at Timmins were 86,412 quarts and, as only 59,000 pounds butterfat (or quarts of 40 per cent butterfat) were received, the difference must have been made from local milk. On this basis, Northern Ontario provided nearly 42 per cent and Southern Ontario 58 per cent of the total cream sold. The difference between receipts and sales at Timmins was greatest during the spring and summer months when the local supply of milk was most abundant.

The grand total of the sales of cream at the four towns was 157,451 quarts and of this total, 74,499 quarts of 40 per cent cream were received via rail express from Southern Ontario amounting to 45 per cent of all sales. The balance originated in Northern Ontario. The difference between 157,451 quarts sold and 126,939 pounds butterfat received as cream, is presumably made from milk received at the dairies and nearly all at Timmins.

Receipts at all towns were fairly uniform month by month, but Northern Ontario receipts were down at Kirkland Lake about 40 per cent for the months of November, January, February and March and this was made up by increased receipts from Southern Ontario for these four months. At Timmins only minor receipts were received from Northern Ontario for six months of the year, while none at all were received during the October to March period.

Cream shipped from Southern Ontario was mostly of 40 per cent butterfat, while that purchased locally averaged about 32 per cent butterfat. The reason for the more concentrated product shipped from Southern Ontario was obviously to minimize carrying charges.

The average daily sales of cream at the four towns varied but slightly over the twelve months period as shown in table 7.

Table 7.- Average Daily Sales of Cream in Four Northern Ontario Towns, 1940-41

Place Marketed		July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	Mar.	Apr.	May	June	Year

HONEY

Receipts of honey at the four towns amounted to a total of 138,248 pounds with a value of $16,782 (table 8). Receipts were heaviest for the months August to December when 61 per cent of the total was received and lightest during the four months April to July when only 14 per cent was received (Appendix Table 49).

Northern Ontario provided 14 per cent of all receipts. These arrived during August and September with the exception of Kirkland Lake where producers sold honey on the farmers' market the year around.

Considerably more honey was produced locally than the above figures indicate and may have been sold on other urban markets or shipped to Toronto. Census figures for Temiskaming and Cochrane show a production of 63,600 pounds and a value of $5,715 for the year 1940.

Table 8.- Honey Receipts at Four Northern Ontario Towns, July 1940-June 1941.

Origin	Volume	Value
	lbs.	$
Northern Ontario	18,770	1,924
Southern Ontario	113,538	14,190
Prairie Provinces	5,940	668
Total	138,248	16,782

EGGS

The eggs received at these towns were exceeded in volume and value only by beef and pork in the meat class (table 9).

A total of 64,665 cases were received costing $547,650, or an average of $8.47 each (Appendix Table 50). This varied from a low price of $7.02 during February to a high point of $10.17 per case in November. Receipts were fairly uniform, averaging 5,389 cases per month.

Only about 9 per cent of receipts originated in Northern Ontario, where prices were higher at $10.40 per case, than the general average. Receipts of Northern Ontario origin received at Kirkland Lake were also fairly uniform and reflect the effects of a steady growers' market throughout the year. A higher than average price of $10.59 per case indicates a sustained demand for strictly fresh eggs at this town.

Table 9.- Egg Receipts at Four Northern Ontario Towns, July 1940-June 1941.

Origin	Volume	Value
	lbs.	$
Northern Ontario	251,632	58,184
Southern Ontario	1,276,042	239,349
Quebec Province	4,293	809
Prairie Provinces	1,377,781	249,308
Total	2,909,748	547,650

Note: 1 dozen = $1\frac{1}{2}$ pounds.

A comparison of these prices with those prevailing in other places for the same period would dispel the general belief that these towns were high priced markets for eggs. This product, like meat, moves eastward from Western Canada and is included by the packing companies in their meat cars. The higher prices prevailing for eggs originating in Northern Ontario is largely a matter of freshness during the months of short supply.

VEGETABLES

The volume of vegetables received at these four towns was 100,080 hundred-weight, valued at $371,983. Thus they came fifth in importance among the commodity groups of farm products marketed (Appendix Table 51).

Northern Ontario supplied about 9 per cent of the total volume and this would be increased if only products commonly grown were taken into consideration.

The main vegetables used by consumers at these four towns in order of their importance were: tomatoes, cabbage, carrots, onions, lettuce, turnips, cucumbers, celery and beets (table 10).

Table 10.- Receipts of the Nine Most Important Vegetables in the Four Northern Ontario Towns, 1940-41

Commodity	Quantity	Average price per hundredweight	Total value	Per cent of total vegetables
	cwt.	$	$	%
Tomatoes	19,081	4.84	92,358	19
Cabbage	18,271	2.22	40,551	18
Onions	12,463	3.33	41,540	12
Lettuce	7,483	4.82	36,097	8
Carrots	12,062	2.57	31,026	12
Celery	3,687	6.74	24,850	4
Cucumbers	4,322	5.62	24,307	4
Turnips	6,576	1.40	9,207	7
Beets	2,510	2.85	7,142	2
Total nine vegetables	86,455	3.55	307,078	86
Other vegetables	13,625		64,905	14
Total all vegetables	100,080		371,983	100

These nine kinds had a combined weight of 86,455 hundredweight and were valued at $307,078. This was 86 per cent of the volume and 83 per cent of the value of the 40 kinds of vegetables recorded. With the exception of the first named, these vegetables, as well as many other kinds, can be grown locally quite successfully. One reason why more has not been grown perhaps is because of well established channels of distribution for vegetables originating in Southern Ontario. This applies to both truck and rail shipments. In the latter case, wholesalers distributing from North Bay take advantage of the 10,000 pounds minimum carloading provided by the Temiskaming and Northern Ontario Railway to re-assemble cars and distribute to various points in small lots at a price to compete with local produce. Thus, these distributors with branch houses in nearly every town do most of the business.

The kinds of vegetables which Northern Ontario most nearly supplied the market and this only to the extent of 20 per cent or so, are: Swiss chard, green onions, green peas, turnips, parsnips, beets, carrots, green beans and radish (table 11).

Vegetables are discussed in descending order of their importance in the following pages. A complete list of the quantity and value of vegetables received is given in Appendix Table 51.

Tomatoes, ripe and green, ranked first in importance of all vegetables received, with 19,081 hundredweight costing $92,358. Northern Ontario provided 166 hundredweight, the most of which were green.

Tomatoes were received every month of the year (Appendix Table 86).

Table 11.- Vegetables Most Commonly Grown in Northern Ontario and Quantities Received at Four Northern Ontario Towns, 1940-41

Commodity	Volume	Value	Average price per pound	Percentage of total receipts grown locally
	pounds	$	cents	
Carrots	279,945	6,829	2.4	23
Cabbage	203,343	5,808	2.9	11
Turnips	155,532	2,365	1.5	24

Celery	6,540	266	4.0	" " "
Spinach	3,987	243	6.0	5
Swiss chard	3,712	158	4.2	86
Cauliflower	2,918	122	4.5	Less than 2%
Broccoli	2,252	134	6.0	22
Endive	1,905	184	10.0	9
Total	904,280	26,837		

The imported replaced the domestic brands entirely during the months of January, February and March, and were entirely absent only during August and September. Imported tomatoes constituted 22 per cent of the total volume received and 49 per cent of total value. The average cost per pound for all tomatoes was 4.8 cents while imported were higher at 10.8 cents. Tomatoes comprised 19 per cent of all vegetables received.

Cabbage was the vegetable having the second largest volume to be received at these towns with 18,271 hundredweight, though onions exceeded it in total value. Northern Ontario supplied but 11 per cent of this volume, while 22 per cent originated outside of Canada. Imported cabbage was received every month except August, September and October. The higher price received for Northern Ontario cabbage may be attributed to freshness and to sales made on growers' markets. (Appendix Table 59).

Onions stood third in the list of vegetables for volume with 12,463 hundredweight and exceeded cabbage in value at $41,540 when green and dry were taken together.. Northern Ontario's contribution of 35 per cent of the total quantity was mostly as green onions. Imported green onions supplied the market entirely

for the months of November to April. Dry onions originating in Northern Ontario were a negligible quantity (Appendix Tables 74 and 75).

Carrots This vegetable was received every month of the year from both Northern and Southern Ontario supplemented by imported carrots during the winter months. A total of 12,062 hundredweight valued at $31,026 arrived at the four markets and of this, carrots from Northern Ontario contributed the largest volume of any of the vegetables supplied from this origin, namely, 2,799 hundredweight valued at $6,829. This, however, was but 23 per cent of the total receipts (Appendix Table 60).

Lettuce The greatest volume of lettuce was received during June and July and sizeable quantities during every other month (Appendix Table 72). Imported supplies were received in all months except July. Northern Ontario supplies were received from June to October inclusive and constituted 6 per cent of the total volume Better prices were received at Timmins for both local and shipped-in lettuce, reflecting greater demand. Head and leaf lettuce were recorded together.

Turnips Turnips were sixth in the list of vegetables received in volume but exceeded by both cucumbers and celery when values were considered. Of the total receipts of 6,576 hundredweight having a value of $9,207, Northern Ontario provided 1,555 hundredweight or 24 per cent of the total. It was one of the two locally grown vegetables to be received during every month of the year under review (Appendix Table 87). It may be assumed from the volume recorded that considerable quantities of turnips were sold by local farmers direct to householders.

Cucumbers Southern Ontario supplied the major portion of the cucumbers received at an average price of 6.2 cents per pound as compared with 12 cents for the imported article and 5.5 cents for those of Northern Ontario origin (Appendix Table 64). Locally grown cucumbers were received during July to October, a period of peak production, while the imported all arrived during the period October to March. Northern Ontario receipts were 3 per cent of the total volume of 4,318 hundredweight.

Celery Supplies from Southern Ontario and from outside Canada shared this market nearly equally (Appendix Table 62). However, Southern Ontario celery came largely in the fall and averaged 5.5 cents per pound, while the imported product arrived in large quantities during the winter months at an average cost of 8.3 cents. Northern Ontario and Quebec supplied similar amounts in the fall of the year, the former at an average cost of 4 cents and the latter slightly over 2 cents per pound. The lower price of Northern Ontario receipts of celery as well as many other such products depended largely upon the season of the year supplies were received rather than because of any marked inferior quality.

Beets Receipts totalled 2,510 hundredweight valued at $7,142. Southern Ontario provided 54 per cent of the total and Northern Ontario 25 per cent (Appendix Table 56). During the peak period of August to October, Northern Ontario supplied nearly 50 per cent of the total receipts, and at Kirkland Lake growers' market beets were received in all months except May and June, which might partly account for the higher price compared with the Southern Ontario product.

Cauliflower Northern Ontario receipts of cauliflower arrived largely during September and comprised less than 2 per cent of the total. Southern Ontario, while supplying the greater part, did not provide any during the months of March and April when only the imported kind arrived at this market. Total receipts were 1,721 hundredweight, having a value of $8,495. Prices varied from $3.34 for August to $7.34 for the month of May (Appendix Table 61).

Green Beans Total receipts of green beans were 774 hundredweight valued at $6,520 and of this volume, Northern Ontario provided 19 per cent during the three months July to September (Appendix Table 55). The imported kind, which included lima, provided the entire supply for the months January to May at prices ranging from $8.80 for May to $20.00 for February.

Melons This term included cantaloupes, Honey Dew and watermelons. The arrivals which are very seasonal came mostly in that period May to September, with 2,005 hundredweight (Appendix Table 73). None at all were recorded for November, December and January. No great variation in price occurred as between melons from the various origins. The reason perhaps was because all watermelons were imported while Southern Ontario and Quebec provided cantaloupe and other melons to the extent of 14 per cent of the total.

Mushrooms Southern Ontario supplied all the receipts of mushrooms arriving at these four towns during the year under study (Appendix Table 71). These appear to have come from one shipper, indicating the specialization in growing and marketing this product. Arrivals began in September, reaching a peak volume in March. Prices averaged 25.5 cents per pound. There were no receipts in June, July and August.

Corn Green corn is one of the most highly seasonal of the common vegetables reviewed, as all receipts occurred during the four months July to October (Appendix Table 63). The bulk of the corn arrived from Southern Ontario in August while the largest quantity from Northern Ontario came during September, amounting to 12 per cent of the total receipts of 72,817 pounds. From Southern Ontario and Quebec came the balance of receipts.

Radish Northern Ontario receipts of radish covered the period May to October and at 14,555 pounds was 19 per cent of all arrivals (Appendix Table 81). Imported radish filled in the other six months, while Southern Ontario receipts arrived every month. Receipts from all origins were 77,123 pounds and were heaviest for May, June and July and fairly uniform for the rest of the year. The average price of the imported radish was 8½ cents against a general average for all origins of 6 cents per pound

Spinach Much of the spinach originating in Northern Ontario may have been sold on retail markets by growers, as the average prices received for that marketed during the summer were higher than the imported which arrived during the winter months (Appendix Table 84). However, receipts of imported spinach were much heavier during the winter period than were receipts from all sources in summer and amounted to 64 per cent of the total volume (Appendix Table 83).

Rhubarb Northern Ontario supplies of rhubarb amounting to 16 per cent of the

total requirements fairly well provided the market for July, August and September and to a lesser extent in May and June (Appendix Table 82). All winter receipts were from Southern Ontario, this being one of the few vegetables not imported at all.

Parsnips Total receipts of parsnips amounted to 1,002 hundredweight and were valued at $2,253. Of this volume, Northern Ontario provided 25 per cent (Appendix Table 77). The balance was received from Southern Ontario, Quebec and a few were imported. Receipts were low in June and none at all for July when supplies of old stock appeared to be off the market.

Peppers A considerable market exists for peppers in these four towns. A total of 608 hundredweight arrived during the year under review valued at $3,236. Receipts came from Southern Ontario and Quebec during the period June to December, and averaged 4.5 cents per pound (Appendix Table 79). Receipts of imported peppers amounting to about 7 per cent of the total came during the winter months and averaged 14 cents per pound.

Green Peas Northern Ontario receipts were 34 per cent of the total volume of 264 hundredweight received, and arrived in large quantities during July, August and September (Appendix Table 78). Peas from Southern Ontario were supplied to this market mainly during the spring and summer months, while imported peas provided the major receipts during the winter months.

Other Vegetables Lesser important vegetables, much of which were imported during winter months, helped to supply these markets, indicating a sustained demand for variety in vegetables even at a much higher price. These included (among others of lesser value) asparagus, endive, garlic and sweet potatoes, each with receipts having a value of $1,000 or more for the year. The volume and value of each may be noted from Appendix Table 51, "Vegetable Receipts at Four Northern Ontario Towns", and from other individual tables in the Appendix.

POTATOES

The marketing of local potatoes is one of the problems of Northern Ontario agriculture. It may be noted from Appendix Table 90 that a total of 128,468 hundredweight was received and that Northern Ontario contributed only 5 per cent of this total. The Maritimes supplied 73 per cent of all receipts. The bulk of Northern Ontario receipts came in the period September to December, though some were received during every month. Wholesalers claimed that this period was the only time they felt safe in handling potatoes of local origin. The claim was that they did not keep well after the New Year. The northern product was more easily available in the fall before the eastern potatoes became plentiful. The reason why wholesalers stocked large quantities of Maritime potatoes some years was on account of the low price at which they could be obtained or on account of the condition of the local crop. The local crop varied considerably from year to year.

Maritime receipts were fairly uniform, reaching a peak during October and November and a low for July and August when new potatoes from Southern Ontario provided the major supplies. Small amounts were received from Quebec, the Prairies and imported origins.

All dealers praised the quality of the Maritime potatoes while some condemned the northern receipts for not being properly graded, packed and labelled. The lower cost at which Maritime receipts can be laid down in comparison to the price asked by local growers is a big factor in the former's favour.

The 75 pound bag was the package used almost entirely. Nearly all the arrivals from Southern Ontario were received in full cars. Supplies from Northern Ontario all arrived by truck while Maritime and other origins came by rail.

Monthly average prices were higher for June and July than the yearly average, reflecting the receipts of new potatoes mainly from Southern Ontario. According to wholesalers, only number one grade is wanted but sometimes receipts were below grade and a settlement reached by degrading to number two at a discount in price. This applied to receipts from all origins.

FRUITS

Fruit comprised the third largest group of commodities as recorded in this study. The total volume amounted to 147,741 hundredweight and they were valued at $737,559. Individual kinds are discussed in the following pages in descending order of importance from the standpoint of value. Imported and domestic kinds have not been separated in this discussion (Appendix Table 91).

Oranges Oranges made up the largest tonnage as well as the greatest value of any single kind of fruit arriving at the four towns during the year. 63,661 cases were received and the laid down cost was $262,621 (table 12). This was 36 per cent of the total value for all fruits.

Receipts were fairly uniform over every month showing the effect of a steady demand at most towns (Appendix Table 104). Prices averaged $4.12 per case.

No effort was made in this survey to study the varieties or kinds most in demand in this area or the source of origin outside of Canada. Oranges arrived mostly in full cars. Some were shipped from North Bay in re-assembled cars, while a few were shipped from Toronto by truck.

Apples Arrivals of this fruit, while considerably less in volume and value than oranges provided twice the tonnage and value of the two next competing fruits. The total quantity of apples amounted to 104,249 bushels which cost $159,356. This was 21 per cent of the total value of all fruit receipts.

Arrivals from Southern Ontario reached a peak for October which would suggest storage for later requirements either by wholesalers or consumers or both (Appendix Table 92). Southern Ontario supplied 58 per cent of total receipts and some arrived in every single month. British Columbia apple receipts were quite uniform except during July and August when considerably less arrived. They made up 40 per cent of all receipts, while Quebec, Maritimes and imported apples made up the other 2 per cent. Ontario shipments were received in many kinds of containers from 6 quart baskets in the early season to a few barrels of Spy apples

during the winter months. Bushel hampers at the yearly average price of $1.37 were received at all times to form the bulk of the receipts.

British Columbia arrivals came in boxes and averaged $1.74 per box. Maritime apples were received in barrels at a laid down cost of $4.11. The high average price noted for July is for new crop arrivals from British Columbia and from origins outside of Canada. Full and mixed cars comprised the bulk of receipts, while one wholesaler trucked his supplies of all fruits from Toronto.

Table 12.- Receipts of Fruits in Relative Order of Importance in Four Northern Ontario Towns, 1940-41

Commodity	Quantity	Value	Percentage of total value
	pounds	$	%
Oranges[2]	4,452,770	262,621	36
Apples[3]	4,383,025	159,356	21
Bananas	1,755,915	91,214	12
Grapes	1,620,568	75,723	10
Peaches	777,924	31,650	4
Strawberries[1]	315,253	28,054	4
Grapefruit[2]	437,430	21,823	3
Lemons[2]	258,230	17,729	2
Pears	313,674	14,806	2
Plums	262,834	14,533	2
Cherries	81,342	8,872	1
Raspberries[1]	40,211	5,157	1
Cranberries	15,573	2,508	2
Pineapples	37,820	1,977	2
Gooseberries[1]	3,967	275	2
Blueberries[1]	2,772	242	2
Apricots	2,536	239	2
Currants	2,164	225	2
Limes	2,092	171	2
Pomegranates	2,264	80	2
Unidentified	5,817	304	2
Total	14,774,182	737,559	100

[1] 1 quart = 1.5 pounds [2] 1 case = 70 pounds [3] 1 bushel = 42 pounds

Bananas This imported fruit came third in volume and value. The volume was 17,559 hundredweight and the value $91,214. British West Indies was the origin, and receipts at Timmins came mostly in full cars. Other town receipts came in mixed or re-assembled cars with some trucked into Kirkland Lake. The average price for the year of $5.19 varied very little from the monthly averages (Appendix Table 94).

Grapes So far as domestic grapes were concerned, 775,890 pounds or 48 per cent were received during September and October (Appendix Table 101). The aver-

age cost was 3.3. Imported varieties arrived every month of the year at an average cost of 5.9 cents per pound. During the period March to June, when only small quantities of imported grapes were received, the price averaged about 18 cents per pound. From a dollar standpoint, the imported receipts were 66 per cent of the total market. Grapes came mostly in mixed cars, the domestic kinds from shipping points in Southern Ontario and the imported from the distribution points of North Bay and Toronto.

The above four kinds of fruit comprised 80 per cent of all fruit received at these four towns in the year July 1940 to June 1941.

Peaches The total weight and value of peaches received was 7,779 hundredweight worth $31,650 at the average cost of $4.07 (Appendix Table 106). All arrived in the five months, June to October Imported peaches only were received during the first two months, while Southern Ontario supplied all receipts for September and October. The six-quart flat and leno basket carried most of the Southern Ontario shipments. A few arrived in 11 quart baskets Imported and British Columbia arrivals came in lugs and half-bushel hampers. For this reason, the average price of imported at 4.6 cents per pound was only slightly higher than the Southern Ontario receipts at 4.0 cents.

Strawberries Of the five fruits originating in Northern Ontario and received at these markets strawberries constituted the kind offered in largest quantities. They amounted to 11,969 pounds and cost $1,669. This was less than 4 per cent of the total strawberry receipts of 315,253 pounds (Appendix Table 110).

Northern Ontario receipts came only in July while the great bulk of receipts came from Southern Ontario in June and July. Imported strawberries filled in from December to May with substantial quantities only during the latter month.

Northern Ontario receipts averaged 13.9 cents per pound, Southern Ontario 7.7 cents, and imported 16 cents. The shipping package in most common use was the 27 quart crate, though 24 and 36 pint crates were also used.

Methods of transportation were mostly via express, some came in mixed cars and a few were received by motor trucks.

Grapefruit Some 6,249 boxes, of 70 pounds each, of grapefruit arrived at these four towns. The value was $21,823, or an average of $3.49 per case (Appendix Table 100). All were imported from such origins as Honduras, Brazil, Trinidad and the United States. Most shipments arrived at these towns in mixed fruit cars re-assembled at North Bay and Toronto. Grapefruit was received in sizeable quantities every month in the year under review. Shipments reached a peak of 795 cases in March with a low of 183 cases in September.

Lemons Receipts of lemons were 3,689 cases valued at $17,729, or an average of $4.80 per case (Appendix Table 102) Like the foregoing imported fruits, receipts were fairly uniformly distributed throughout the year.

Pears While pears were only received from Southern Ontario during the four months August to November, the imported varieties came every month at a much

higher price (Appendix Table 107). British Columbia receipts arrived over a longer period than those from Southern Ontario. A total from all origins of 313,674 pounds valued at $14,806 were received. Southern Ontario arrivals came mostly in 6 quart baskets of the Bartletts and pickling varieties. British Columbia and imported receipts were in boxes

Plums Arrivals of plums at these four towns totalled 262,834 pounds valued at $14,533. These were received during the period June to October, and unlike many other Southern Ontario grown fruits, marketings were not prolonged through the winter months by imported varieties (Appendix Table 108). Ontario receipts were shipped in 6 and 11 quart baskets while British Columbia and imported plums came in boxes.

Cherries The receipts of cherries from all sources totalled 81,343 pounds, of which Southern Ontario supplied 61,643 pounds or 75 per cent (Appendix Table 96). When values were considered, Ontario's contribution was, however, only 56 per cent of the total value, as the cost of imported cherries averaged 25 cents, British Columbia 17 cents and Southern Ontario 8 cents per pound. Arrivals were in June, July and August with some imported cherries received in May.

Raspberries Raspberries were the next important fruit in terms of value. 40,211 pounds costing $5,157 arrived from all sources. Northern Ontario sources contributed 8,113 pounds valued at $1,197 which was but 2 per cent of the total (Appendix Table 109). This was an average cost of 14.7 cents per pound against a general average for all sources of 12.8 cents. The shipping packages used were the 24 and 27 quart and the 36 pint crates, and most of the raspberries came by express during July and August. Imported raspberries were almost nil, only a few pounds being received in December at a high price of 42 cents per pound.

Cranberries Some 15,573 pounds of cranberries costing $2,508 were received from Southern Ontario and imported origins. This was an average cost of 16 cents per pound. Arrivals were recorded for the period September to January (Appendix Table 97).

Pineapples Arrivals of this fruit amounted to a total volume of 37,820 pounds which had a value of $1,977. Receipts covered all months except August, September and October (Appendix Table 105). The average price was 5.2 cents per pound.

Other Fruits Other fruits received but having laid down values of less than $1,000 were apricots, blueberries, currants, gooseberries, limes and pomegranates. See Tables 93, 95, 98, 99, 103, 111 and 112 of the Appendix for volume and values of these lesser important fruits.

GRAINS

Receipts of grain at the four towns amounted to 9,057,113 pounds with a value of $162,533 (Appendix Table 113). This consisted of whole grains only. No ground grain or mill feeds were recorded in this survey.

Oats comprised the largest item under this heading with a total of 6,377,592 pounds which had a laid down value of $99,255, or $1.56 per 100 pounds. Northern Ontario provided less than 2 per cent of these oats and no other grains from this origin were recorded (Appendix Table 120). An explanation for the light offering of local oats commonly grown may be noted from the short crop produced in 1940, and the effect of the Government freight assistance policy on grains shipped from Western Canada during the year under review. Western Canada supplied the major portion. Practically all the grain grown in Northern Ontario is fed on the farms where it is grown.

Mixed Grains followed oats in importance as 1,429,280 pounds, having a value of $[illegible],816 were received. These averaged $1.88 per 100 pounds (Appendix Table 119).

Beans were third in both volume and value of grain receipts, 589,590 pounds arrived costing $22,901 at an average price of $3.88 per 100 pounds (Appendix Table 115). About 3 per cent of the total receipts were imported, the balance originated in Southern Ontario.

The rest of the grains received consisted of wheat, peas, barley, corn, flax and buckwheat. These originated in Southern Ontario and the Prairie Provinces with the exception of peas, which came from Southern Ontario only (Appendix Tables 114, 116, 117, 118, 121 and 122).

HAY

The total volume of hay received at the four towns amounted to 1,773 tons and at the average cost of $12.27 had a value of $[illegible],755 (table 13). All the above originated in Northern Ontario except one lot recorded as received at Timmins during September (Appendix Table 123).

Table 13.- Hay Receipts at Four Northern Ontario Towns, July 1940 - June 1941

Origin	Volume	Value
	pounds	$
Northern Ontario	3,507,875	21,590
Southern	36,720	165
Total	3,544,595	21,755

Only one carload was received at Kirkland Lake, which town appears to handle very little hay. However, minor amounts may have been trucked direct to consumers and so did not pass through organized marketing channels.

All receipts at Cochrane were trucked in from farms during the months of September to January.

At Iroquois Falls, 61 per cent of receipts were received by truck during the months November to May with the exception of the month of February when there were no truck arrivals. Rail receipts were 39 per cent of the total volume and were recorded during the period December to May. Unit value was slightly below the average for all towns at $11.75 per ton.

Timmins provided the largest market for hay when 1,344 tons were received. Of this 41 per cent came by rail and 59 per cent by truck. Some hay was received in Timmins during every month of the year both via truck and rail. The cost was slightly higher than the average for all towns.

Marketing Northern Ontario Products

It will be seen from table 14 that Northern Ontario receipts of farm products marketed at the four towns amounted to a total of 25,788,299 pounds valued at $1,174,548. This was 18 per cent of the grand total value of products received from all origins for the year concerned.

Table 14.- Receipts of Local Farm Products at Four Northern Ontario Towns, 1940-41

Commodity	Quantity	Value	Average price per pound	Percentage of total value from Northern Ontario sources of supply
	pounds	$	cents	
Fluid milk	18,141,653	523,351	2.9	100
Cream	52,824	22,422	42.4	41
Ice cream	630,828	141,419	22.4	100
Butter	4,932	135,624	27.5	15
Cheese	31,933	5,281	16.5	5
Honey	18,770	1,924	10.3	14
Beef	804,824	103,078	12.8	13
Pork	469,576	72,185	15.4	8
Veal	112,000	19,202	17.1	10
Poultry	88,363	22,283	25.2	9
Lamb	28,415	5,911	20.8	8
Unidentified meats	9,503	1,552	16.5	3
Eggs	251,632	58,184	23.1	9
Oats	11,176	173	1.5	1
Hay	3,507,875	21,590	.6	99
Potatoes	679,551	9,917	1.5	5
Vegetables	921,807	27,366	3.0	9
Fruits (berries)	22,857	3,106	13.6	2
Total	25,788,299	1,174,548		18

Fluid milk and ice cream were the only commodities entirely supplied by the local area. The main reason for this is that milk, being a highly perishable product, will not bear shipping long distances, therefore production has been built up close to the consuming areas. The same holds for ice cream which requires expensive refrigeration for shipping.

Efforts have been made on the part of distributors to obtain all cream supplies locally, but the commodity can only be supplied from milk in excess of whole milk requirements which was not sufficient during part of the year.

Hay was another commodity that Northern Ontario provided nearly 100 per cent of the supply. In this case a bulky, comparatively cheap product could not absorb freight charges over long distances. A few years back before farmers became convinced of the necessity of supplying only a good grade of hay and in seasons when Southern Ontario supplies were cheap, dealers obtained much of their requirement from the older parts of the province.

Butter, cheese and honey were products which, though produced here in very modest amounts, were compelled to find markets outside the area during the period of peak production.

A comparison of table 15 with those of Appendix Tables 40 and 42 shows that less than one half of the total amount of local butter and cheese production was marketed in the four northern towns. However, it may be assumed that some of the difference was marketed in other northern centres. The balance was shipped to Toronto and Montreal during the period of peak production.

Local refrigeration for butter and cheese would spread the distribution over a longer period.

Table 15.- Factory Production of Butter and Cheese in Northern Ontario, 1940-41

Month	Butter		Cheese		Total
	pounds	$	pounds	$	$
July	173,307	41,634	29,519	2,667	44,301
August	151,168	33,681	26,912	2,329	36,010
September	123,904	28,613	22,627	1,976	30,589
October	102,849	29,516	9,837	773	30,289
November	55,178	16,110	1,345	195	16,305
December	26,511	9,435	-	-	9,435
January	23,364	8,176	-	-	8,176
February	19,667	6,884	-	-	6,884
March	27,219	9,941	-	-	9,941
April	55,235	17,760	293	50	17,810
May	120,389	37,808	7,574	1,288	39,096
June	188,061	60,252	30,255	5,446	65,698
Total	1,066,852	299,810	128,362	14,724	314,534

Meat products of Northern Ontario origin received at these four towns did not average more than 10 per cent of total receipts with the major portion of this being sold at growers' markets. The reason perhaps why more local beef and lamb in particular are not received is not so much because of lack of supplies but rather on account of organized channels developed by the packing companies before local production had reached present proportions. It may be seen from table 16 that many carloads of cattle and several of lambs leave the district every fall for Toronto, perhaps to be returned later in the dressed form. As a consequence the farmer suffers to the extent of the freight charges both ways.

Table 16.- Northern Ontario Live Stock Marketings at Toronto, 1940-41

Month	Cattle	Calves	Hogs	Sheep and Lambs	Total
	number	number	number	number	number
July	82	150	12	61	305
August	124	200	5	519	848
September	384	512	-	489	1,385

December	90	42	-	47	179
January	47	7	-	-	54
February	21	5	-	-	26
March	-	-	-	-	-
April	76	28	2	4	110
May	124	92	-	10	226
June	156	382	27	40	605
Total	1,598	1,782	52	1,922	5,354

Potatoes and vegetables of Northern Ontario production were received in limited amounts and mostly at retail markets. The proportion of the total was 5 and 9 per cent respectively.

Egg receipts originating in Northern Ontario were approximately 9 per cent of the total egg receipts, and the bulk of these came to the growers' markets.

A study of the foregoing statements would indicate that with the exceptions of milk and hay products, farmers appear to try to sell most of their produce at retail prices. Besides that recorded at growers' markets, it is reasonable to assume that considerable quantities were sold by farmers from house to house. This does not make for any great volume but some producers purposely limit their production to what they can sell direct to the consumer.

It would appear that to supply any considerable proportion of these towns' requirements, growers would have to discard this practice, produce wholesale quantities of products in demand and market through wholesale or co-

operative channels similar to that already in use for the sale of milk and hay.

This method of selling direct to the consumer developed during the pioneer days just before the first Great War when farmers could easily sell all their production to the lumber camps and the new developing mines. Local farmers later lost this market when grades and grading were initiated and they were reluctant to comply with the new regulations. The first highway from North Bay was completed into this area in 1937, and the following depression years saw a great deal of Southern Ontario produce dumped on these markets to the discouragement of local production.

Growers' Markets,- The three growers' markets operating in the towns of Timmins, Kirkland Lake and Cochrane play an important part in the marketing and distributing of local farm produce. During the year, total value of products so marketed amounted to $252,965. This was 21 per cent of the value of all Northern Ontario receipts for this period. The markets are operated only one day each week in Kirkland Lake and Cochrane and three times a week in Timmins.

Table 17.- Summary of Sales of Agricultural Commodities by Growers on the Growers Markets at Timmins, Kirkland Lake and Cochrane, 1940-41

Commodities	Kirkland Lake		Timmins		Cochrane		All Markets	
	Weight	Value	Weight	Value	Weight	Value	Weight	Value

*1½ pounds = 1 dozen.

Kirkland Lake growers' market was organized in 1929, while the Cochrane market came into being at a considerably earlier date. Timmins has the newest market. It was organized in its present state in 1940 and operated only five months of the year under review.

Quality Requirements,- The quality or grade of produce offered on these growers' markets was mostly very good. The fact that 47 per cent of the vendors were on the Kirkland Lake market for more than 50 weeks of the year is assurance that the quality was sufficiently high to maintain the demand of consumers (table 18).

Nearly all produce was offered in open containers and therefore, in most cases did not require grade markings. The most notable exception to this was

eggs which carried a grade tag according to the regulations.

Table 18.- Frequency of Vendors on Growers' Markets at Northern Ontario Towns, 1940-41

Frequency of trips	Kirkland Lake	Timmins	Cochrane	Total All markets	Proportion of total
number	number	number	number	number	%
1 - 10	6	-	-	6	4
11 - 20	7	12	-	19	13
21 - 30	13	9	1	23	16
31 - 40	14	12	3	29	20
41 - 50	13	3	-	16	11
51 - up	47	-	6	53	36
	100	36	10	146	100

Potatoes and other vegetables, when not marked with the grade, weight, name and address of the vendor, were offered in open bags, hampers or baskets.

Meats at all growers' markets were sold largely in retail cuts and subject to the buyer's inspection. At Timmins, all meat offered had previously been stamped by an inspector for the local Board of Health and was required to have been killed in the local abattoir. Other markets provided a more or less casual inspection by the market official in charge.

A definite opening hour was observed at all growers' markets before which sales were prohibited. Sales on the market at Kirkland Lake were all completed by one o'clock in the afternoon. This policy apparently carried over from the days when vendors used the trains exclusively and the return trip began at 3 o'clock. The other markets continued more or less all day.

Distances Travelled to the Growers' Market,- The distance farmers travel to the public market is an important item in the cost of selling their produce. All vendors at Kirkland Lake, whose farms were all some distance away, travelled more than 31 miles while 50 per cent came more than 45 miles to this market.

At Timmins 50 per cent of the growers live within five miles and only a few came as far as 45 miles.

Cochrane vendors also live quite close. Seventy per cent came 5 miles or less and all came from less than 10 miles distant.

Type of Vehicle Used,- The distance from the growers' market and the road conditions largely designated the type of vehicle or the method of conveyance used by these vendors.

Since the highway was improved in 1939 and the weekly market train to Kirkland Lake discontinued, farmers use various kinds of motor vehicles (table 20).

Table 19.- Distances Travelled by Growers Coming to Northern Ontario Public Markets, 1940-41

Miles Travelled	Kirkland Lake	Timmins	Cochrane	Markets	Percentage of Total

No horse-drawn vehicles were seen on the public market at Kirkland Lake since distances to market are so great, but at Cochrane and Timmins, horses were used to some extent for bringing produce to the public markets

Table 20.- Vehicles Used by Growers Coming to the Public Markets at Northern Ontario Towns, 1940-41

Growers' Sales,- Gross returns by growers from yearly sales on various markets varied considerably, for example, 26 growers had sales of $500 or less while 3 growers sold produce worth more than $6,000 (table 21).

These sales did not include sales of milk or cream supplied to pasteurizing plants, sales of live stock to drovers, or sales of products for consumption at towns other than those surveyed.

Table 21.- Growers' Sales at the Northern Ontario Towns, 1940-41

Gross value of all sales	Kirkland Lake	Timmins	Cochrane	Total	Percentage of all vendors
$	number	number	number	number	%
500 or less	10	15	1	26	18
501 - 1,000	19	15	5	39	27
1,001 - 1,500	16	3	3	22	15
1,501 - 2,000	17	3	-	20	13
2,001 - 2,500	10	-	1	11	7
2,501 - 3,000	8	-	-	8	5
3,001 - 3,500	10	-	-	10	8
3,501 - 5,500	7	-	-	7	5
6,001 - and more	3	-	-	3	2
Total	100	36	10	146	100

Forty-five per cent of the vendors sold less than $1,000 worth or products, 28 per cent were between $1,000 and $3,000, while 15 per cent sold more than $3,000 of farm produce on these markets.

It is reasonable to assume that to maintain a reasonable standard of living some of the vendors must have derived revenue from the disposal of products not included in these public market sales.

Possibilities for Future Agricultural Production in Northern Ontario

It was felt that with present sales of local produce amounting to less than 20 per cent of the total market for agricultural commodities in these four towns there was room for a considerable expansion in production of certain products commonly grown in Northern Ontario.

The survey may be interpreted as indicating a necessity for change in marketing practices before any appreciable expansion can take place.

This problem perhaps can only be solved by establishing a proper balance between production and marketing. Before marketing practices can be improved, production must be stepped up to more nearly meet the demand. On the other hand, producers want a market which will give them fair returns for capital and labour invested before they increase production to any extent. Co-operative marketing is indicated in numerous replies from growers who were asked to express their views, but experience has shown that co-operative associations often get the tail-end of the business where volume is limited.

This is a highly competitive market and only by producers obtaining fair market prices can local production be expanded at the expense of products now shipped in.

Market Promotion in Northern Ontario.- With the thought in mind that local farmers in this area were not getting their share of this market as indicated by

previous investigations, the Ontario government appointed a Marketing Promoter in the fall of 1935. His duties were to contact the buyer and the farmer, bringing them together to make sales. It soon became apparent that this was not enough and that a further step was necessary if the transactions were to be satisfactory to both parties concerned.

This step at first consisted in the promoter handling all details of each transaction so as to guarantee quality and regulate deliveries. This business amounted to many thousands of dollars each year. In an effort to shift considerable responsibility to producers themselves, co-operatives were formed at Timmins, Cochrane, Charlton and New Liskeard. The latter co-operative jointly organized by farmers and town businessmen received sufficient government aid to buy and equip a plant.

This organization in Temiskaming district, while out of the area surveyed, ships considerable farm produce to Timmins during some years. With their grading machinery for potatoes and all kinds of seed grains, together with refrigeration for meat and eggs, they have done much to improve the quality of Northern Ontario produce and thereby remove the stigma some wholesalers attached to it in the past.

The measure of success attained in this one case has enthused the others to try to do likewise.

Opinions of Growers on Marketing,- The growers' replies to questions pertaining to the marketing of their products as asked by the enumerators on the public markets are discussed under the following headings:

(1) "How could the marketing of Northern products be improved to increase sales in the Gold Belt Market?" Many different replies were given by growers, depending upon which town market they patronized and also upon the individual's reaction to this question. At Kirkland Lake the possibility of resuming the market train service during the winter after a lapse of a few years was the method given to increase sales in this market by 30 per cent of the vendors. Better grade of produce was cited by 17 per cent, while 7 per cent thought better market-place conditions would increase sales. Seven per cent felt that preventing outside trucks would help and 8 per cent thought that co-operative marketing would solve the problem. Ten per cent were satisfied with present conditions while 27 per cent replied they did not know.

Better grade and more continuous supplies of produce, abolition of compulsory slaughtering in the abattoir and co-operative marketing were the main points advanced in the order of their importance by Timmins vendors as a means of increasing sales at that place. The compulsory slaughtering of animals by the abattoir imposed by local Board of Health regulations was a "sore spot" to meat vendors. This was particularly so to those coming from a distance as it made it necessary for them to make two trips for each market, one to bring the live animal for killing and another to sell the meat on market day.

Most growers on the Cochrane market were satisfied that the local sales could not be increased but were emphatic in demanding an enlarged outlet elsewhere. To this end they felt the serious lack of adequate storage space to

distribute their produce, close in particular, not only to local consumers but also to Timmins and other points. Co-operative selling, operation of a weekly market train to Timmins and the abolition of the Board of Health regulations regarding the sale of meats at the latter town were the other main conditions advanced to increase sales and thereby encourage production.

A tabulation of all replies is shown in table 22.

Table 22.- Growers' Answers to the Question - "How Could the Marketing of Northern Products be Improved to Increase Sales in the Cold Belt Market"?

Answers	Number of replies	Percentage of total
		%
Resume market train service	32	22
Better grades of produce	21	14
Co-operative marketing	19	13
Larger outlet for products	16	11
Abolition of Board of Health regulation re meat inspection at Timmins	10	7
Satisfied	10	7
Better market place and conditions	7	5
Prevent outside truckers selling	7	5
No comment	24	16
Total	146	100

(2) "Could the production of farm products be profitably increased in the North? If so, what products?" This question was asked in two parts. The answer to the first part was somewhat dependent upon the respondent's reaction to the preceding question. If conditions were improved to the extent of increased sales then he could answer "yes" and state what products in his opinion could be profitably increased in production. Viewed in this light of past experience it was not surprising that several answered "no" and "doubtful" to the question, even though they perhaps realized there was plenty of room for expansion of certain products in which profitable production has been demonstrated. Lack of competent help was a main reason advanced against any increase at the present time.

Of the 146 vendors who were asked the question, 103 replied in the affirmative to the first part of the question, five said "no", while "doubtful" was stated by 38.

To the latter part of the question as to what products could be profitably increased in production, the same pattern of replies might be expected. The vendors saying "yes" were invariably speaking from experience and the products they cited were those they sold to the greatest extent. The "doubtful" and "no" group gave this reply in some cases because of having reached their individual marketing limit, while for others, lack of help or inability to

produce more than at present was the reason for their answer. Table 23 shows, as well as tabulation permits, the type of response received.

Agricultural Conditions in Northern Ontario

Area,- Temiskaming, the more southerly of the two districts, is 78 miles long from south to north with an average width of 84 miles. In this area is located what is known at the "Little Clay Belt" containing about one million acres of arable land. This unbroken block of land lies between the 47½ and the 48 parallel of latitude, or less than 300 miles due north of Toronto.

Cochrane district is much more extensive. Beginning at the 48½ parallel on the south and the province of Quebec on the east, it extends to James Bay and the Albany River on the north.

It contains the "Great Clay Belt" of 16 million acres which begins at the southern boundary and extends north and west. (See Figure 1).

Soil,- The soil of the settled areas is quite similar in both belts comprising a layer of black loam or muck of varying depths from a few inches to several feet and underlaid by a deep subsoil of stratified clay. This soil is rich in humus, nitrogen and potash, though in many cases lacking in phosphates. The soil is slightly alkaline to definitely acid in reaction depending upon the amount of humus and lime present, and on older farms, the type of farming practiced. The general typography of the land may be described as rather level to rolling.

Climate,- The climate is quite typical of the Temperate Zone for this latitude. While the winters are cold, the air at this season is dry, making it more agreeable and easier to bear. The long hours of daylight in summer hasten the growth of crops, especially when accompanied by plenty of rainfall as is generally the case.

The following tables were compiled by the meteorological bureau of the Hollinger Gold Mines at Timmins, Northern Ontario. Their co-operation in supplying this information is gratefully acknowledged by the authors.

The tables show the maximum and minimum temperatures, the snow, rainfall and total precipitation, together with the total hours of sunshine. It is realized that these figures state the kind of weather observed at the specific point in question only, but may be taken as a fair indication of the climate for the whole area concerned. (See tables 24-29).

The mean as well as the maximum and minimum temperatures as plotted from the above tables are shown by figure 2.

Population,- The population of the area according to the 1941 census is 130,693 persons. The table below shows the breakdown of these figures into those persons who live and work on farms and those who may have been classed as rural by reason of residing in a rural municipality, but who really live and work in urban centres. This explains the difference between these and the census figures which were obtained on a municipal basis. Rural population comprise 27 per cent and urban 73 per cent of all persons occupying the area. This is a ratio of about 1 to 3 and is in contrast with a provincial ratio (where 38 per cent of the people live in rural areas) of slightly more than 1 to 2. Of the 95,740 people living in urban areas in Northern Ontario 70,755 or 74 per cent reside in the four towns surveyed. The balance of urban residents are nearly equally divided between the south part of Temiskaming and the west part of Cochrane districts

Population of Rural and Urban Areas in Northern Ontario as Compiled from the 1941 Census Totals*

Area	Cochrane	Temiskaming	Total	Percentage of total	Increase over 1931
Rural (1941 census)	22,689	12,264	34,953	27	-
Urban (1941 census)	57,400	38,340	95,740	73	-
Total 1931	58,033	37,043	95,076	-	-
Total 1941	80,089	50,604	130,693	100	35,617
Increase over 1931	22,056	13,561	35,617	-	38%

*It was found impossible to break down the 1931 total population into rural and urban to compare with that obtainable for 1941. Therefore the increase in the 10 year period cannot be definitely apportioned between the two areas. A study of the table following, however, would indicate that almost all of the increase occurred in urban areas.

Occupied Farms,- The number of occupied farms in the two districts according to the 1941 census was 5,143 farms or about 60 per cent of the total available land in these settled townships. This is an 8 per cent increase over the 1931 figures when 52 per cent of the available land was occupied. The data shown separately for the two districts comprising Northern Ontario is contained in the table below. This increase should perhaps be somewhat larger in comparison with 1931 than indicated, because of the doubling up method used by the census of 1941 when any number of farms operated by one farmer were treated as a unit. Further study of the figures show a decrease in the older settled sections which may be due either to this increased size of farms or to unoccupied lands. Aggregate increases occurred mainly in the newer townships.

Number of Occupied and Unoccupied Farms in Northern Ontario, 1931 and 1941*

*Dominion census, 1941

Grade Requirements of the Market,- When asked the question as to what grade of produce the market demanded all wholesalers emphatically stated only first grade produce was acceptable. Though they sometimes were compelled by lack of suitable supplies to accept a lower grade they claimed that it did not pay because of the high shipping charges from outside points.

While this question was intended to cover all the produce they sell, replies from wholesalers were largely based on the quality of grade of the produce shipped into the area. Their answer to the above also applies to local produce, even though it is quite conceivable that much of the latter is offered ungraded and therefore subject to the buyers' appraisal. In some cases the buyers' appraisal of local produce appears to have been quite severe and may be due to the lack of confidence in the ungraded locally grown produce. This statement is especially applicable to potatoes and feed oats, two products grown locally that meet strong competition from shipped-in supplies which are graded to meet the approval of the consumers.

Most of the local oats were offered buyers "mill run" while western oats

were graded. The grades most in demand were No.3 C.W., No.1 feed and No.2 C.W., in this order. When local oats were offered, the sample had to be superior to these grades and accompanied by a guarantee that the shipment would be equal to sample before a sale could be made. Repeat orders were common when oats were properly cleaned by a cleaning plant.

Potatoes and vegetables are required to be of the first grade. Shipped-in produce from points of surplus supplies most nearly meet this requirement. Maritime potatoes were necessarily graded No.1 or at least No.2 for inter-provincial shipment. Wholesalers contended that while Northern potatoes and vegetables had excellent cooking qualities, their preparation for market was sadly lacking in too many instances.

Opinions of Wholesalers re Northern Ontario Produce,- Wholesalers of products commonly grown in Northern Ontario were not entirely unanimous in their opinion as regards the quality of locally grown produce. Some stated that quality was good, others fair, one said it was generally poor, while another stated that it could be good but was nearly always poor. The concensus of opinion was that the quality or grade of most produce depended very largely upon the individual farmer. Some farmers always had good quality products to offer while others were just as sure to be the reverse. As one large wholesaler put it, "Before local producers can hope to capture this excellent market for farm produce which flourishes right in their midst, they must be prepared to grow sufficient quantities and market them in an orderly manner.

The following table shows the average type of response received from the wholesalers and distributors who were interviewed.

Opinion of Wholesalers Re Grading Northern Ontario Produce

Number interviewed	Kind of produce	Majority of opinions as to quality and volume received
11	Vegetables	Good to excellent for most vegetables offered. Desire larger supplies than receiving.
10	Potatoes	Poor to fair, due to lack of grading, occasionally good - good cookers.
8	Eggs	Very few handled. Room for considerable expansion.
10	Cheese	Fair to good, but not generally ripened long enough before marketing.
10	Honey	Excellent, over 90 per cent white offered. Desire greater volume.
8	Oats	Generally too light in weight. Offerings light.
8	Hay	Fair to good, mostly good. Desire a larger percentage of dairy cattle hay.
4	Meats	Offerings confined to the autumn period - need greater production before packers interested.
10	Cream	Desire greater volume especially during winter and more uniformity as to butterfat content.

Wholesalers of all farm produce were also asked the question "How could the marketing of Northern Ontario produce be improved to increase sales in the Gold Belt Market"? The type of replies received to the above question was closely allied with opinions given as to the quality of produce now being received from this origin and shown in table 22 The majority of replies for all products might be summed up in one sentence "better grading, packaging and continuity of supplies".

TRANSPORTATION

To the Area,- To appreciate some of the difficulties affecting transportation into the area from without one has but to look at the map of Northern Ontario (figure 1) to note the great distance shipped-in produce must travel. However, this is not such a handicap as appears at first glance. While it is some 900 miles to Winnipeg, the natural trend of all surplus prairie farm products is eastward and when cars are routed via the Canadian National Railway to Cochrane they are easily distributed throughout the Northern Ontario area by liberal use of the stop-off privilege more cheaply than the same produce can be laid down at Southern Ontario points. The new trans-Canada highway, while completed from Cochrane west had not as yet been used for freighting produce. The Canadian National Railway main line continues on to Quebec and Montreal some 500 miles to the east. Over this road many cars of eastern potatoes reach these towns and the rate is just as cheap as that to Southern Ontario points. A new highway from Montreal and district in the east taps the area at Kirkland Lake. The pioneer highway No.11 was opened from North Bay in 1927. This was the first road connection these districts had with any outside point. This road is nearly parallel to the Temiskaming and Northern Ontario Railway from North Bay to Hearst, a distance of approximately 400 miles. This opening for truck hauling farm produce from Southern Ontario nearly revolutionized the marketing of these products at Northern towns. The effect was to seriously curtail northern production of produce which could easily be trucked in from the south. However, during the year under review, war restrictions on long distance trucking as well as increased employment for truckers at other more lucrative hauling jobs resulted in such a reduction in this method of transportation that less than 10 per cent of the total movement of produce into the area was by motor truck. Of the 3,392,000 pounds moved by trucks, 48 per cent went to Kirkland Lake, 33 per cent to Timmins, 15 per cent to Iroquois Falls, while 4 per cent went to Cochrane.

Freight and express rates on many commodities are much lower for traffic going northward than for traffic going in the opposite direction.

Wholesale distributors are allowed a minimum of 10,000 pounds carload on the Temiskaming and Northern Ontario Railway, which makes it possible for them to re-assemble cars at North Bay and ship imported and other out-of-season produce to various northern points at a price these consumers can afford to pay and quite in line with that prevailing farther south in Ontario.

Within the Area,- Good highways have changed the methods of transportation within the area. Milk, hay, potatoes, vegetables and market produce all travel by motor truck whereas a few years back the railways moved most of these products.

SUMMARY

Receipts of all farm products at the four towns Timmins, Kirkland Lake, Cochrane and Iroquois Falls, amounted to a total volume of 47,217 tons at a laid down cost of $6,376,989.

Of this, Northern Ontario receipts were 13,138 tons costing $1,174,548.

Meats headed the main commodity groups with a value of $2,290,191 or 36 per cent, followed by dairy products valued at $2,056,229 or 32 per cent. Other commodity groups were, fruits 11 per cent, eggs 9 per cent, potatoes and vegetables 9 per cent, with grains, hay and honey making the balance of 3 per cent of the value of all products.

Farm products originating in the Prairie Provinces supplied the largest proportion of the market with 42 per cent of the total value of all receipts from this source These products were meats, dairy, eggs and grains

Products from Southern Ontario were second in importance, amounting to about 26 per cent of the total value and consisted of all products but mainly dairy, meats and eggs.

Northern Ontario provided 27 per cent of the volume but 18 per cent of the value of produce received. All commodity groups were represented although dairy, hay and meats predominated.

Sources of supply outside Canada furnished nearly 10 per cent of all products by value. They were mostly fruits but vegetables were also an important contribution.

The contribution from the Maritime Provinces was mostly potatoes and a small quantity of fruit which in total amounted to about 10 per cent of the total tonnage but only about 2 per cent of the total value.

British Columbia and Quebec each shipped about 1 per cent of the total value. Fruit and vegetables came from British Columbia while Quebec shipments were of vegetables and dairy products.

Pork headed the list of meats for both value and volume, having a laid down cost of $972,660 for 62,215 hundredweight. This was 42 per cent of the value of all meat products. Beef receipts had a value of $781,934 and represented 34 per cent of the total value. Poultry costing $240,592 comprised 10 per cent of the total.

Packers supplied the major part of meats with shipments from the Prairie Provinces.

About 14 per cent of all meats originated in Northern Ontario.

Receipts of eggs were 64,665 cases valued at $547,650 or an average cost of $8.47 per case. About 47 per cent of all receipts were from the Prairie Provinces.

Butter constituted 46 per cent of the value of all dairy products, of which 66 per cent originated in the Prairie Provinces

Fluid milk was 35 per cent of the total value of dairy products and, taken together with processed milk, made up over 38 per cent of the total value.

Thirty per cent of the total receipts of all milk was processed milk based on the whole milk equivalent of 2½ quarts of fluid to one pound of processed. Ninety-two per cent of this processed milk consisted of evaporated milk.

Ice cream ranked third among the dairy products with a value of $141,419. This was 7 per cent of the total, all of which originated in Northern Ontario.

Cheese, largely from Southern Ontario, accounted for about 6 per cent and cream made up the balance of 3 per cent of the total value.

Milk distribution in the area was confined to ten distributors. All milk sales were reported as pasteurized. No price changes during the year were noted at any towns, either for milk received or sold.

More than 70 per cent of Northern Ontario receipts of farm products were made up of dairy products and 63 per cent of these consisted of fluid milk.

The total tonnage of vegetable receipts was 5,039 tons valued at $371,983. The origins of vegetable receipts and percentages for each were: Southern Ontario 52 per cent, imported 37 per cent, Northern Ontario 7 per cent, Quebec 3 per cent and Prairies and British Columbia 1 per cent of the value of all receipts recorded

Vegetables comprised 6 per cent of the value of all commodities received.

Sources outside of Canada shared in supplying all but 9 of the 38 kinds of vegetables received from all sources, while Northern Ontario did not provide any receipts for 13 different kinds

The Maritime Provinces accounted for 97,619 hundredweight of the potatoes from a total supply of 128,428 hundredweight. Potatoes from the Maritimes represented 76 per cent of the total as against 5 per cent from Northern Ontario. Arrivals reached a peak during October when 17,287 hundredweight arrived. This quantity was 38 per cent more than the average monthly receipts.

The total receipts of fruit amounted to 7,587 tons having a value of $737,559.

Oranges, apples, bananas and grapes, in order of importance, provided nearly 80 per cent of the value of all fruits received.

Imported origins supplied 63 per cent of total receipts of fruit with 17 different kinds. Southern Ontario provided 13 kinds, while from British Columbia 6 different kinds were recorded.

Strawberries, raspberries, blueberries, gooseberries and currants were received from Northern Ontario in limited quantities.

Receipts of grain from the Prairie Provinces amounted to 83 per cent of volume and 73 per cent of total value. All kinds recorded except peas and beans were received from this source of supply. Southern Ontario provided all kinds amounting to 26 per cent of the total value. The balance of the receipts consisted of Northern Ontario oats and beans from outside Canada

Only whole grains were recorded. The great bulk of this (70 per cent of volume) consisted of oats at an average laid down cost of $1.56. Mixed grains were 16 per cent of total receipts, while beans were third in importance with 14 per cent of the total value.

Only one carload of hay was received at these towns from outside the Northern Ontario area during the year. A total of 161 cars were recorded as received

A majority of the Northern Ontario growers who were interviewed on the public markets voiced the opinion that production of Northern grown products could be profitably increased. A few said not, and a small proportion were rather doubtful.

The products in which production could profitably be increased by growers were generally stated to be those they commonly sold.

The majority of wholesalers suggested that eggs, chickens, honey, cream and vegetables were products which could be produced locally and for which the demand exceeded the supply.

Many of the growers and most of the wholesalers thought that better grading of local produce would provide the greatest opportunity for increased sales in the Gold Belt area. Added to this was the suggestion of co-operative or more orderly marketing.

The average value of the sales of the 146 growers who sold produce on the growers' markets was $1,585. Eighteen per cent had sales of less than $500 while 7 per cent had sales exceeding $3,500.

Motor trucks were the principal means of conveyance used by growers going to the public markets; 48 per cent used this type of vehicle. Motor cars were used by 33 per cent while horse-drawn vehicles provided transportation for 10 per cent of the growers

The average grower travelled 34 miles to sell his produce on one of these three markets

According to the wholesalers who were interviewed , consumers in these Northern Ontario towns demand high quality, well graded products. To date, most of their needs appear to be more easily met with commodities shipped into the area than with locally grown products.
